

Equity Risk Management Strategy (ERMS)

Current allocation as of most recent
change on 5/13/2025

Any investment involves risks, including the risk of a loss of principal. The Equity Risk Management Strategy invests primarily in ETFs, which are subject to the risk that the values will fluctuate with the value of the underlying investments or indices the ETFs are tracking. **Exchange Traded Funds (ETFs) represent a share of all stocks in a respective index. ETFs trade like stocks and are subject to market risk, including the potential for loss of principal, and may trade for less than their net asset value. The value of ETFs will fluctuate with the value of the underlying securities. Investors should review the prospectus and consider the ETF's investment objectives, risks, charges, and expenses carefully before investing. Prospectuses are available through your Financial Advisor and include this and other important information.**
